An Overview of CDC & NACHC's

LGBT HEALTH PROJECT

Conducted a virtual learning community to improve health outcomes for LGBT patients in 10 health centers. The project increased the availability of culturally responsible comprehensive primary care including Sexual Orientation and Gender Identity (SOGI) data collection and workflows.

PATIENTS whose SOGI information was collected and provided to care teams to enhance patient-centric care

97,886

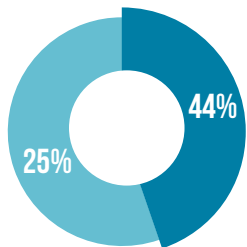

CLINICAL CASES about providing the best care to LGBT patients presented for faculty discussion and recommendations in Project ECHO™

65

100%

OF PARTICIPATING HEALTH CENTERS

who implemented policies protecting patients based on gender identity and/or gender expression

INCREASE in chlamydia and gonorrhea screening rates among LGBT people cared for by providers in the intervention (from 25% to 44%)

19%

38%

INCREASE in rate of patients whose SOGI data was collected (from 13% to 51%)
